COSA Pharmacology of Cancer Chemotherapy WORKSHOP

TOPICS TO BE COVERED INCLUDE

- Cytotoxic principles & pharmacokinetics
- Antimetabolite cytotoxic agents
- Alkylating agents
- Antibiotic cytotoxic agents & Platinum agents
- Plant Alkaloids & Topoisomerase inhibitors
- Hormonal cancer therapies
- Targeted therapy
- Oral therapies & Monoclonal antibodies

Each module is designed to provide education on the pharmacology of cancer chemotherapy and targeted therapy. Objectives of the course are to:

- Improve knowledge of advanced trainees on the principles of cancer chemotherapy
- Improve knowledge and understanding of advanced trainees on the pharmacology of individual classes of cancer chemotherapy and targeted therapies
- Improve understanding of the rationale for protocols used with reference to combinations, dosing and administration
- Provide a forum for peer discussion on principles of cancer therapy

The individual classes of agents will be discussed in each module including:

- Origin of agent
- Mechanism of action & cell cycle activity
- Mechanisms and pathways of resistance
- Tumour group activity and clinical uses
- Protocol combinations
- Toxicities and side effects
- Interactions
- Availability of drug in Australia
