

## ISOQOL Offering IPRO Course in Collaboration with Using PROMs "Down Under"

### Introduction to Quality of Life and Patient-Reported Outcomes *Theory, Measurement and Applications*

Collecting and acting upon Patient-Reported Outcomes (PROs) is one of the cornerstones of patient-centered care. PROs include symptoms, some aspects of function, health perception, health related quality of life and quality of life. Choosing the right set of PROs can be challenging as there are many options, each with advantages and disadvantages.

### Curriculum

---

This intensive and interactive educational course provides a basic level introduction to the why and how of using PROs in research. Attendees will be given the opportunity to apply their learning throughout the course.
